CHUNDURU NARASIMHA SATWIK

Bengaluru, India | +91 6362661224 | satwikchunduru10@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

DevOps Engineer with 1+ year of enterprise experience building CI/CD automation, managing artifact repositories, **securing cloud tooling**, and deploying containerized applications across **AWS**, **GCP**, and on-premise infrastructure. Hands-on expertise with **Kubernetes (GKE/EKS)**, **Terraform (IaC)**, **Docker**, **GitHub Actions**, and **JFrog Artifactory** at a Tier-1 banking organization. Migrated 600+ repositories to GitHub Enterprise Cloud, enforced DevSecOps standards, and modernized cloud-native deployment pipelines.

PROFESSIONAL EXPERIENCE

DevOps Engineer — *Australia and New Zealand Banking Group (ANZ)* Jul 2025 – Present

- Designed and maintained **GitHub Actions CI/CD pipelines** for end-to-end build, test, artifact publishing, and automated deployment workflows across multiple application services in a regulated enterprise banking environment.
- Built automated build pipelines for **Java Maven projects** producing WAR artifacts, and **Docker image builds**, with integrated publishing to **Enterprise JFrog Artifactory** for centralized binary and container image management.
- Deployed and orchestrated containerized applications to **Kubernetes (GKE/EKS)** and on-premise servers; managed deployments using **Helm charts**, Workload Identity Federation, IAM service roles, and automated `kubectl` rollout validation.
- Maintained and provisioned cloud infrastructure components using **Terraform (IaC)**, implementing modular configurations, remote state management, and repeatable environment provisioning across cloud environments.
- Spearheaded migration of **600+ mission-critical repositories** from GHES to GitHub Enterprise Cloud across **9 engineering squads**, building Bash and **GitHub REST API** automation for validation and repository standardization.
- Enabled and enforced **GitHub Secret Scanning, Dependabot alerts, and push protection** across enterprise repositories, automating security feature enablement at scale to strengthen organization-wide **DevSecOps governance**.
- Modernized legacy **Codefresh and uDeploy** pipelines by architecting reusable, config-driven GitHub Actions workflows with externalized configurations across **DEV, SIT, QA, and PROD** environments for AU & NZ regions.
- Collaborated with platform engineering teams to **troubleshoot CI/CD failures**, resolve corporate proxy and network blockers (Alpaca, DNS), and debug build and infrastructure issues across **Linux and Windows** environments using Bash and PowerShell.

Student Intern — *Continental Autonomous Mobility* Aug 2024 – Nov 2024

- Designed and developed a **security requirements management dashboard** using Python and Power BI for automotive software teams, enabling centralized tracking, visualization, and filtering by category, priority, and module.
- Conducted comparative performance analysis of **AES and RSA** cryptographic algorithms, benchmarking encryption throughput, key generation latency, and memory footprint for resource-constrained embedded systems.

TECHNICAL SKILLS

Cloud & Infra:	AWS (EC2, S3, IAM, EKS), GCP (GKE, Workload Identity), Kubernetes, Terraform (IaC), Helm, Docker
CI/CD & DevOps:	GitHub Actions, JFrog Artifactory, Codefresh, uDeploy, Maven, GitHub Enterprise (GHES/GHEC), GitOps
Scripting & Dev:	Bash, Python, PowerShell, Java, SQL, C/C++, JavaScript (ES6+), REST APIs
Security & Tools:	Secret Scanning, Dependabot, DevSecOps, Black Duck, Checkmarx, Linux/Shell, RCA, Agile/Scrum

EDUCATION

B.Tech in Computer Science & Engineering (Cyber Security) Oct 2021 – Jun 2025
Dayananda Sagar University, Bengaluru **GPA: 8.96 / 10**

PUBLICATION & CONFERENCE

"Deepfake Image Content Detections using AI Algorithms: A Survey & Analysis" Dec 2025
Presented at IEEE Int. Conference on Computational Innovations (ICCIST 2025) **IEEE**
Presented peer-reviewed research surveying spatial and temporal deepfake detection methodologies (CNN, EfficientNet, ResNet); recognized by IEEE conference committee for contributions to AI media forensics.

PROJECTS

Advanced Deepfake Detection System — Hybrid deep learning pipeline combining EfficientNetB0, ResNet-50, and CNN-LSTM for spatial, artifact, and temporal deepfake detection, achieving **94%+** accuracy on benchmark datasets.

Chest X-Ray Tuberculosis Classification — Medical image classification pipeline evaluating 5 models (CNN, Decision Tree, Random Forest, KNN, SVM); CNN achieved **92%** accuracy after hyperparameter optimization.
